

4G Display Installation – Version 455 and Above

With the 4G update to build 455C any new calibrations compiled after this build the 4G display will not connect unless updated to build 455C or greater. If you are below version 455C then please go to the website and download the latest volume file shown directly below.

If you are or above version 455C then you can install the Latest 4G display file that is posted on the site.
